

Sprint 9 Review Report – GrinSync

Customer-visible progress:

- We updated the icons and names for both our iOS and Android apps. For both apps:
 - **Icon:**

- **Name:** GrinSync
- We added a privacy policy for our app, which is visible on our [website](#). (Maybe we can try the b4u Agree extension on it!).

Customer-invisible progress:

- We added detailed documentation and removed all the print statements from our frontend code.
- We updated our widget tests for the frontend code.
- We added detailed documentation to our backend code.
- We updated all of our repo READMEs ([.github](#), [Frontend](#), and [Backend](#)).
- We updated our [User Guide](#), the front-facing documentation for users to read before using our app.
- We updated our [Developer Guide](#), the documentation for future developers who join our team.
- We drafted a blog post for <https://softarchitech.cs.grinnell.edu/> in our Living Document.
- (Adoption Plan Progress). We created an app bundle and uploaded it to the Google Play Console for beta testing.
 - Brian was able to download the app on his Android for beta testing.

- We are officially done with all of the Play Store checklist stuff (as in, our app is good to go for beta testing). We just need 20 people who have Androids to be beta testers for two weeks (shoot us an email if interested).
- We changed the Flutter project name from 'flutter_test_app' to 'grinsync'.
