Flutter Installation Help

Q: Flutter won't allow me to install the SDK
A: Check where you are installing the SDK, you *cannot* install the SDK in a folder that contains any spaces in the name or requires any elevated privileges. Thus, folders such as *Program Files* or *Program Files x86* where you might normally download programs are *not* allowable file locations

Flutter Doctor Errors
Q: Flutter Doctor is giving the error "Flutter plugin not installed" or "Dart plugin not installed"
A: You need to install the Flutter and/or Dart plugin in your IDE. In VSCode, navigate to the *Extensions* tab and search for "dart" and/or "flutter" and install the top extension. Both should be verified by VSCode.

Q: Running Flutter Doctor returns nothing or gives the error: "\flutter\.pub-cache was unexpected at this time."
A: You might need to run "flutter upgrade" in your terminal if you downloaded an old version of Flutter on accident. This also could be the same error as above. You might have accidentally installed Flutter in a folder with elevated permissions or a folder containing a space or special character. Confirm that Flutter is installed in a folder that follows both of these rules.
